Scope and notation

Channel topology is partitioned into one diagram per declared Channel, retaining every participant and binding. Repeated participants refer to the same source declarations. The diagrams show explicit participation in one Mode, not runtime delivery, transport or execution order. Sender arrows point from participant to Channel; receiver arrows point from Channel to participant. Each arrow groups all messages for that participant/channel/role; the register retains every binding and source proof. Modes have no implicit inheritance.

Selected mode: **NormalDesktop**. Mode source: NormalDesktop.
