VP09 — Dataset, Datagram and persistent Database

Revision: `e2a2f39e5c78476bb1bba08e406114367eb59953f02a63e952e435c880d24007`.

Explicit holders, sources, contracts, variants, fields and projections.

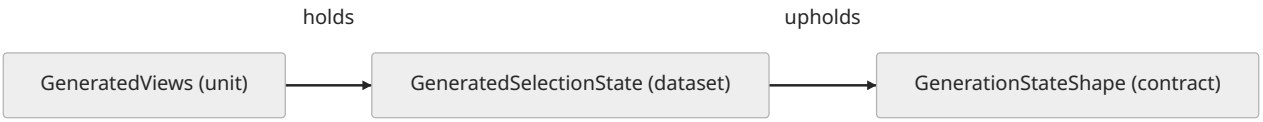

Data origin and holder: FrozenExportSnapshot

Source facts: f0361, f0746.

Declarations: ExportSnapshotShape, FrozenExportSnapshot, Publication.

Data origin and holder: GeneratedSelectionState

Source facts: f0410, f0423.

Declarations: GeneratedSelectionState, GeneratedViews, GenerationStateShape.

Data origin and holder: MainDocumentState

Source facts: f0231, f0526.

Declarations: DocumentStateShape, Documents, MainDocumentState.

Scope and notation

Dataset neighborhoods retain explicit from, holds, owns and upholds relations. Database means a persistent data source, not SQL tables, keys, transactions, a storage engine or deployment. Unit-held data has no declared persistence. These are definitions, not runtime instances. Contract completeness is a source assertion, not execution evidence. Optional fields do not imply null, empty, false or zero. Projections do not specify executable transformations. Encoding and bit positions belong to VP10.

Data definitions

- FrozenExportSnapshot (Dataset): holder Publication; contract ExportSnapshotShape; Unit-held; persistence unspecified. Source facts: f0361, f0746.
- GeneratedSelectionState (Dataset): holder GeneratedViews; contract GenerationStateShape; Unit-held; persistence unspecified. Source facts: f0410, f0423.
- MainDocumentState (Dataset): holder Documents; contract DocumentStateShape ; Unit-held; persistence unspecified. Source facts: f0231, f0526.

No datagram declarations.

Database register

No Databases are declared; no persistent store is inferred.

Contract register

All Contracts are included, even unused/open definitions. Open a Contract in the navigation tree for its structure diagram. Counts describe explicit shape membership (fields / variants / permitted messages), not runtime coverage.

Projection responsibilities

Projects relates Functionality, Dataset and Datagram together; it does not imply a lossless conversion or a runtime call.

No projections are declared.
