VP03 — Responsibilities and capabilities across the architecture

Revision: `b3011e73ee1eece4b0df6861ea14435f312f5e54fcccec544f2b0ceebfe7012e`.

owns, realizes and provides. Capability is not Feature.

Responsibilities and capabilities across the architecture

Source facts: f0028, f0029, f0030, f0031, f0041, f0046.

Declarations: Desktop, Local, Remote, Standalone, Unconnected.

Scope and notation

The complete logical architecture uses contains edges, including isolated components. R keys identify responsibilities on their immediate owners (owns). C keys identify capabilities: contributes summarizes an owns + realizes path; provides records an explicit offered capability. These annotations are not new SDL relations. Realizes is a contribution, not proof of complete or verified realization. Ownership does not imply provision, and provision does not imply realization. Rounded standalone capabilities have neither a represented contributor nor provider. Keys are sorted within this snapshot. Features and runtime allocation belong to other viewpoints.

Responsibility register

Key	Functionality	Immediate owner	Capability contributions	Source facts
R01	Display	Desktop	Delivery	f0028, f0041

Capability register

Key	Capability	Explicit providers	Contributing responsibilities	Source facts
C01	Delivery	Desktop	Display	f0031, f0041
C02	Unconnected	Not specified	Not specified	—

Not specified means no such fact is declared; it does not assert impossibility.
